

Parallel and Distributed Computer Systems MSc

Vrije Universiteit Amsterdam - Faculteit der Exacte Wetenschappen - M Parallel and Distributed Computer Syst - 2014-2015

This master's programme emphasizes experimental computer science, rather than theory, and typically requires design, implementation, testing, and performance analysis of software for advanced parallel and distributed systems. It contains a balance between classes and practical work: about one third of the first three semesters consists of practical projects. The final semester is a master's thesis, which will usually involve doing research in conjunction with one of the faculty members. In contrast to other master's programmes, PDCS requires that students explicitly apply to be admitted. Up-to-date information can be found at the FEW-website.

Niveau	500
---------------	-----

Doel vak

The objective is to obtain a good understanding of modal logic and its use in computer science and artificial intelligence.

Inhoud vak

A thorough introduction to modal logics, and its applications in computer science and artificial intelligence. We will select some themes from the book *Modal Logics for Open Minds*, by Johan van Benthem: basic modal logic and possible world semantics, bisimulation and invariance, modal definability, decidability, ... In particular we treat the modal logics most relevant to computer science and AI: temporal, dynamic and epistemic logic.

Onderwijsvorm

Weekly 2 lectures and 1 exercise class, for the duration of 7 weeks.

Toetsvorm

A written exam and assignments that can make half a point bonus.

Literatuur

Johan van Benthem, *Modal Logics for Open Minds*, CSLI Publications 2010.

Aanbevolen voorkennis

The bachelor course *Logica en Modelleren* (previously *Inleiding Logica*), or an equivalent introduction to first-order logic.

Doelgroep

mAI, mCS, mPDCS

Advanced Topics in Computer and Network Security

Lesmethode(n)	Hoorcollege
Niveau	600

Doel vak

The goal of this course is for students to develop an in-depth understanding of classical and recent research in system and network security, and practice their presentation and argumentation skills. The class is restricted only to PDCS students so that individual guidance can be offered.

Inhoud vak

The course takes the form of seminars based on a selection of papers that either have had a strong impact on security today, or explore

novel ideas that may be important in the future. Students are required to read all papers assigned during the semester and be able to competently discuss the material in class. Each student will be responsible for presenting one lecture -- that lecture will be based on the assigned paper for the week including as much relevant related work as necessary to distill the work presented in the paper. The speaker will have 25 minutes talk to present the papers she read. The presentation will be followed by 20 minutes of interactive discussion in the class. Before each lecture each student must submit to me at least two thought-provoking questions on the main paper for that week. These questions should critically evaluate the paper (eg, questioning the assumptions). At the end of the semester, each student must write a 4-pages long position paper about one of the topics that has been discussed in class. This can be about the topic the student has presented, or about any other topic that has been discussed in class. This is intended to be an interactive class, and as such, class participation will play a significant role in the grading criteria. Students will be graded on the presentation and analysis of their assigned paper, their participation in discussions and questions.

Onderwijsvorm

Seminar, active participation

Toetsvorm

Presentations, participation at seminar, and a 4-page position paper.

You will be graded with respect to your presentation, your position paper, and your active participation to the seminar. Each of these aspects will account for 1/3 of the final grade.

Important: you have to get at least 6 in all the 3 aspects to be able to pass the exam.

Literatuur

A selection of papers.

Vereiste voorkennis

The class is restricted only to mPDCS students so that individual guidance can be offered

Doelgroep

This course is only accessible for mPDCS students.

Coördinator	dr. A.M. Oprescu
Docent(en)	dr. A.M. Oprescu
Lesmethode(n)	Hoorcollege
Niveau	600

Doel vak

Discuss advanced topics relevant for traditional and modern distributed systems.

Inhoud vak

The course takes the form of a seminar that is based on a selection of papers that either have had a strong impact on distributed systems today, or explore novel ideas that may be important in the future. Subjects will cover important aspects of distributed systems such as communication, data consistency, replication, fault; tolerance, performance, scalability, etc. Also, modern distributed systems such as next- generation Web- based systems and wireless sensor networks will have their place. For this seminar we expect the students to actively participate by means of presentations and discussions. Papers for discussions will be selected from the base set, with possibly 1 or 2 added where appropriate.

Onderwijsvorm

Seminar.

Toetsvorm

Presentations, participation at seminar, and a 4-page position paper.

Literatuur

A (selection of a) list of papers, yet to be decided.

Vereiste voorkennis

Distributed Systems (400130).

Doelgroep

Coördinator	dr. J.M. Slowinska
Examinator	dr. J.M. Slowinska
Lesmethode(n)	Hoorcollege
Niveau	600

Doel vak

Deepening insights in static and dynamic analysis, applied to binaries and malware

Inhoud vak

Binaries in general, and malware in particular, are very hard to analyse. Unlike with source code, you have no idea what the binary does, or even what the data structures look like - let alone what they mean!. Security analysts, forensic experts, and reverse engineers often have to dig their way through such programs to figure out what the code is all about, and where the interesting pieces of information are.

How do they do this? What techniques and tools can they fall back on, and, conversely, what techniques do the malware authors use to prevent this?

This is a (tough) hands-on specialisation course for a small group of motivated students, who will learn essential analysis techniques and methods in both static and dynamic analysis. Not only will they pick apart real malware, they will also be working on a set of cool and very complicated challenges to find a secret buried deep inside a binary program.

For static analysis, we will look in depth at the generation of control flow graphs, and complications that may arise due to indirect calls and jumps (as well as deliberate obfuscation). For dynamic analysis, we will look at data and control flow tracking (dynamic information flow tracking)

Binary patching will be used to circumvent the binary's defenses. To do so, students need to know details about popular binary formats (ELF, PE, etc.), and work with all manner of state-of-art system tools to analyse the binaries (think IDA Pro, OllyDbg, taint analysis tools, etc.).

In addition, students will be exposed to programs that actively fight static and dynamic analysis.

Doel vak

To give an introduction the theory of error correcting codes and to cryptography.

Inhoud vak

This course provides a thorough introduction to the theory of error correcting codes, and to cryptography. It is aimed especially at students of Computer Science. For error correcting codes we shall include cyclic codes, BCH codes, Reed-Solomon codes and burst error correction. For cryptography we discuss some modern public key cryptography (e.g., RSA, ElGamal, DSA).

Onderwijsvorm

Lectures and exercise classes

Toetsvorm

Written exam and homework

Literatuur

We shall be working from "Coding theory and cryptography, the essentials" by Hankerson, Hoffman, Leonard, Lindner, Phelps, Rodger and Wall (second edition, revised and expanded).

Aanbevolen voorkennis

Some knowledge on linear algebra, on the integers modulo n , and on polynomials.

Doelgroep

mAI, mCS, mMath, mPDCS

Distributed Systems

Vakcode	X_400130 (400130)
Periode	Periode 2
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Exacte Wetenschappen
Coördinator	dr. ing. T. Kielmann
Examinator	dr. ing. T. Kielmann
Docent(en)	dr. ing. T. Kielmann
Lesmethode(n)	Hoorcollege
Niveau	400

Doel vak

After taking this course, students will be able to:

- understand to a large extent the intricacies related to designing and developing a distributed computer system.

- understand the tradeoffs between centralized, distributed, and fully decentralized solutions.

- be capable of successfully studying research papers on (advanced) distributed systems.

Inhoud vak

It is difficult to imagine a standalone modern computer system: every such system is one way or the other connected through a communication network with other computer systems. A collection of networked computer systems is generally referred to as a distributed (computer) system. As with any computer system, we expect a distributed system to simply work, and often even behave as if it were a single computer system. In other words, we would generally like to see all the issues related to the fact that data, processes, and control are actually distributed across a network hidden behind well-defined and properly implemented interfaces. Unfortunately, life is not that easy.

As it turns out, distributed systems time and again exhibit emergent behavior that is difficult to understand by simply looking at individual components. In fact, many aspects of a distributed system cannot even be confined to a few components, as is easily seen by just considering security.

In this course, we pay attention to the pillars on which modern distributed systems are built. Unfortunately, these pillars cannot be viewed independently from each other: each one is equally important for understanding why a distributed system behaves the way it does, and depends on the way that other pillars have been constructed. In this sense, pillars form principles, in turn offering a view that one can take when studying distributed systems. We will consider the following principles:

- architectures
- processes
- communication
- naming
- coordination
- consistency and replication
- fault tolerance
- security

These principles will be discussed in the context of a few simplifying concepts that have been used to master the complexity of developing distributed systems: objects, files, documents, and events.

Onderwijsvorm

The course is taught as a series of lectures.

Toetsvorm

Written exam.

Literatuur

This year, we will use a reader. Details about its distribution will be announced via blackboard in due time.

Vereiste voorkennis

Students should have taken a standard course on computer networks. Experience with (distributed) programming will be helpful.

Coördinator	prof. dr. A.E. Eiben
Examinator	prof. dr. A.E. Eiben
Docent(en)	prof. dr. A.E. Eiben, J.V. Heinerman MSc, prof. dr. B. Filipic
Lesmethode(n)	Hoorcollege
Niveau	400

Doel vak

To learn about computational methods based on Darwinian principles of evolution. To illustrate the usage of such methods as problem solvers and as simulation, respectively modelling tools. To gain hands-on experience in performing experiments.

Inhoud vak

The course is treating various algorithms based on the Darwinian evolution theory. Driven by natural selection (survival of the fittest), an evolution process is being emulated and solutions for a given problem are being "bred". During this course all "dialects" within evolutionary computing are treated (genetic algorithms, evolutiestrategieën, evolutionary programming, genetic programming, and classifier systems). Applications in optimisation, constraint handling, machine learning, and robotics are discussed. Specific subjects handled include:

various genetic structures (representations), selection techniques, sexual and asexual variation operators, (self-)adaptivity. Special attention is paid to methodological aspects, such as algorithm design and tuning. If time permits, subjects in Artificial Life will be handled. Hands-on-experience is gained by a compulsory programming assignment.

Onderwijsvorm

Oral lectures and compulsory programming assignment. Highly motivated students can replace the programming assignment by a special research track under the personal supervision of the lecturer(s).

Toetsvorm

Written exam and programming assignment (weighted average).

Literatuur

Eiben, A.E., Smith, J.E., Introduction to Evolutionary Computing.

Coördinator	dr. P. Lago
Examinator	dr. P. Lago
Docent(en)	dr. ing. G. Procaccianti
Lesmethode(n)	Hoorcollege, Practicum
Niveau	400

Doel vak

Learn the basics of empirical experimentation in the field of Software Engineering. Be able to operate in a lab environment and build a successful experiment for software energy consumption. Become familiar with the research problems in the field of green software engineering. Understand and measure the impact of software over energy consumption.

Inhoud vak

Students will work in teams to perform experiments on software energy consumption in a controlled environment. They will have to carry out all the phases of empirical experimentation, from experiment design to operation, data analysis and reporting. They will be provided with examples of previous experiments, but they will have to choose by themselves the experimental subjects and hypotheses to test. During the lab sessions, students will be assisted for technical operation of the lab equipment as regards measurement and data gathering. Students will also receive the required training for data analysis and visualization (i.e. graphs, dashboards) using specialized software.

Onderwijsvorm

Lecture, lab sessions

Toetsvorm

Teamwork, assignments, final project.

Literatuur

Industrial Internship

Vakcode	X_405080 ()
Periode	Ac. Jaar (september)
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Exacte Wetenschappen
Coördinator	dr. ing. T. Kielmann
Examinator	dr. ing. T. Kielmann
Niveau	500

Doel vak

Deepening insights by applying study contents in an industrial setting

Inhoud vak

Individual project work by which the student applies the study contents in an industrial setting. Before the start of the internship, the student has to get approval for the internship project by a VU Computer Science lecturer. The project has to focus on research or development aspects, by which the student can apply and validate the study contents within the specific constraints of an industrial setting. At the end of the internship, the student submits a written report to the lecturer, in which the work, the lessons learned, and the insights from applying study contents in an industrial setting are described.

For the grading of the report, most important are the student's reflections on study contents vs. "industrial reality": What did you learn during your studies that was particularly helpful for your internship? What is different in an industrial environment, compared to university? What did you learn during your internship that you were not told at university?

Onderwijsvorm

individual project work in an industrial setting

Toetsvorm

written report

Aanbevolen voorkennis

The student should have completed at least 48 credits of his or her Master programme such that there are sufficient study contents to be applied in an industrial setting.

Doelgroep

Large-Scale Computing Infrastructures

Vakcode	X_405106 ()
Periode	Periode 5
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Exacte Wetenschappen
Coördinator	dr. ing. T. Kielmann
Examinator	dr. ing. T. Kielmann
Docent(en)	dr. ing. T. Kielmann
Lesmethode(n)	Hoorcollege
Niveau	500

Doel vak

Students explore the field of large-scale computing infrastructures. They study its technological frontiers from scientific publications and get hands-on experience via programming assignments.

Inhoud vak

Cloud infrastructures like Amazon's EC2 or Microsoft's Azure provide seemingly limitless compute and storage capacity. The technology underlying these systems strongly relies on decades of work on high-performance computing platforms, such as cluster computing, computing grids, and supercomputers. We study aspects of computing in large scale, such as resource management and scheduling, remote data access, energy efficiency, failure resilience, performance of large systems, as well as suitable software architecture and programming models such as MapReduce.

Onderwijsvorm

Introductory lectures, followed by a seminar part and practical programming assignments. In the seminar part, students explore the technological frontiers of large-scale computing, published in top-quality scientific venues of the field. Students present their findings and write position papers about topics presented by other students in the class. With the practical programming assignments, students get hands-on experience with large-scale computing infrastructures.

Toetsvorm

Both parts contribute 50% each to the grade:

- seminar presentation and position paper
- programming assignments

Literatuur

Various scientific articles as available online

Aanbevolen voorkennis

Students should have basic knowledge about distributed systems and parallel application programming.

Students must be able to program in Java and Python (or be able to get the needed skills on the fly).

Doelgroep

mPDCS, mCS

Doel vak

Introduction to the proof assistant Coq and its type-theoretic foundations.

Inhoud vak

A proof-assistant is used to check the correctness of a specification of a program or the proof of a theorem. The course is concerned with the proof-assistant Coq which is based on typed lambda calculus. In the practical work, we learn to use Coq. One of the exercises is concerned with the correctness proof of the specification of a sorting algorithm, from which a functional program is extracted. In the course, we focus on the Curry-Howard-De Bruijn isomorphism between proofs on the one hand and lambda-terms (which can be seen as functional programs) on the other hand. This is the basis of proof-assistants like Coq. We study various typed lambda calculi and the corresponding logics.

Onderwijsvorm

2 times 2 hours theory class, 2 times 2 hours practical work

Toetsvorm

Written exam, obligatory Coq-exercises, obligatory hand-in theory exercises.

Literatuur

Course notes

Vereiste voorkennis

An introduction course in logic.

Doelgroep

mCS, mAI, mMath

Overige informatie

The course is taught once every two years, the next opportunity will be in study year 2014-2015

Master Project

Vakcode	X_400461 (400461)
Periode	Ac. Jaar (september)
Credits	36.0
Voertaal	Engels
Faculteit	Faculteit der Exacte Wetenschappen
Coördinator	dr. ing. T. Kielmann
Examinator	dr. ing. T. Kielmann
Niveau	600

Doel vak

With the Master project, the student is to demonstrate the ability to integrate knowledge, insights, and skills gained so far in the Master programme, and to apply them to a new or otherwise unknown subject.

Inhoud vak

The student is offered a research question that needs to be answered following a systematic approach. This approach includes steps such as exploring relevant literature, and will, in general, consist of setting up and carrying out experiments by means of simulations, emulations, or actual systems software. The results and findings will be described in a thesis conforming to the academic standards in the field. An oral presentation of the project results concludes the project.

Toetsvorm

The grade will be determined based on the quality of the performed project work, a written thesis, and an oral presentation.

Aanbevolen voorkennis

The student must have completed (almost) the complete study program before starting the Master Project.

Operating Systems Practical

Vakcode	X_405071 (405071)
Periode	Ac. Jaar (september)
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Exacte Wetenschappen
Coördinator	ir. M.P.H. Huntjens
Examinator	ir. M.P.H. Huntjens
Docent(en)	ir. M.P.H. Huntjens
Lesmethode(n)	Hoorcollege
Niveau	500

Doel vak

Gain practical experience with the contents of the Operating Systems course.

Inhoud vak

This practical is divided into two separate exercises, each adding functionality to a different part of the MINIX 3 operating system. Both exercises are required to pass the class. The first exercise adds kernel functionality (process profiling), the second one adds file system functionality (defragmentation). Together, these courses cover a significant part of the content of the Operating Systems course.

Overige informatie

Het vak Operating Systems Practical zal dit jaar op individuele basis georganiseerd worden.

Parallel Programming for High-performance Applications

Vakcode	X_400161 (400161)
Periode	Periode 1
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Exacte Wetenschappen
Coördinator	prof. dr. ir. H.E. Bal
Examinator	prof. dr. ir. H.E. Bal
Docent(en)	prof. dr. ir. H.E. Bal
Lesmethode(n)	Hoorcollege
Niveau	400

Inhoud vak

This lecture discusses how programs can be written that run in parallel on a large number of processors, with the goal of reducing execution time. The class has a brief introduction into parallel computing systems (architectures). The focus of the class, however, is on programming methods, languages, and applications. Both traditional techniques (like message passing) and more advanced techniques (like parallel object-oriented languages) will be discussed. Several parallel applications are discussed, including N-body simulations and search algorithms. About 4 lectures are devoted to an important new development: programming many-core machines such as Graphical Processing Units (GPUs). The class fits well with existing research projects within the department of Computing Systems. It is a good basis for M.Sc. projects in the area of parallel programming, which use the parallel computing systems of the department.

Onderwijsvorm

Class with separate practicum (6 ECTS).

Toetsvorm

Written exam.

Literatuur

To be announced.

Vereiste voorkennis

Knowledge about the first part of the class Parallel Programming is recommended (introduction into parallel programming, MPI, and Java).

Doelgroep

mAI, mBIO, mCS, mPDCS

Parallel Programming Practical

Vakcode	X_400162 (400162)
----------------	-------------------

Periode	Periode 2, Periode 3
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Exacte Wetenschappen
Coördinator	prof. dr. ir. H.E. Bal
Examinator	prof. dr. ir. H.E. Bal
Docent(en)	prof. dr. ir. H.E. Bal
Lesmethode(n)	Hoorcollege
Niveau	500

Inhoud vak

With this practicum, several parallel programs have to be written, using different programming environments, including Java, MPI, and CUDA/OpenCL (for GPUs). The programs must be tested on a parallel machine of the faculty (see <http://www.cs.vu.nl/das4>) and the performance (speedups) of the programs must be measured, analyzed, and, whenever necessary, optimized. A brief report must be written that explains the approach and discusses the measurements.

Onderwijsvorm

Practical computer work.

Toetsvorm

Practical computer work.

Aanbevolen voorkennis

Parallel Programming Course.

Doelgroep

mAI, mCS, mPDCS

Overige informatie

mCS and mAI students can only do this course in period 2.
mPDCS students can only do the course in period 3.
It is not possible to (re)submit assignments outside the given period.

PDCS Programming Project

Vakcode	X_405054 (405054)
Periode	Ac. Jaar (september)
Credits	12.0
Voertaal	Engels
Faculteit	Faculteit der Exacte Wetenschappen
Coördinator	dr. ing. T. Kielmann
Examinator	dr. ing. T. Kielmann
Niveau	600

Doel vak

Let the student get hands-on experience with developing systems-level software in the context of ongoing research projects

Inhoud vak

PDCS programming projects can be taken instead of other practical courses. They are often related to existing research programs in computer systems. There is no set course description as each project is negotiated individually with the professor supervising and grading it. The assignment aims to offer students challenging projects that are often research-oriented by nature. Students are strongly advised to talk to staff members individually to see whether they have a project that matches the student's interest, as well as the capacity to supervise such a project.

Onderwijsvorm

Individual programming project

Performance of Networked Systems

Vakcode	X_405105 ()
Periode	Periode 4
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Exacte Wetenschappen
Coördinator	prof. dr. R.D. van der Mei
Examinator	prof. dr. R.D. van der Mei
Docent(en)	dr. ing. T. Kielmann, prof. dr. R.D. van der Mei
Lesmethode(n)	Hoorcollege
Niveau	400

Doel vak

The student will acquire basic knowledge of:

- performance aspects of software and hardware systems,
- performance aspects of networked systems and services,
- performance engineering principles and methods,
- quantitative models for predicting and optimizing the performance of networked systems,
- quantitative models planning capacity of networked systems.

The student will gain experience in engineering and planning performance of networked systems, and will learn how to tackle practical performance problems arising in the ICT industry.

Inhoud vak

Over the past few decades the use of information and communication technology (ICT) has been experiencing tremendous growth, which is not likely to slow down in the near future. As a consequence, our information and communication systems are expected to process huge amounts of (digital) information, which puts a tremendous burden on our ICT infrastructure. At the same time, our modern society has become

largely dependent on the well-functioning of our ICT systems; large-scale system failures and perceivable Quality of Service (QoS) degradation may completely disrupt our daily lives and have huge impact on our economy. Motivated by this, the course will focus on the following performance related issues of networked systems:

- How can we design and engineer networked systems for performance?
- How can we plan capacity in networked systems?
- How can we predict and optimize the performance of networked systems?

In addition to basic theory of performance models and engineering for networked systems, the application of the theory to solve practical problems will play a central role.

Onderwijsvorm

Classroom lectures and practical homework assignments.

Toetsvorm

The assessment will be based on both homework assignments and a written exam.

Literatuur

A textbook, supplemented with a number of subject-matter research papers.

Protocol Validation

Vakcode	X_400117 (400117)
Periode	Periode 5
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Exacte Wetenschappen
Coördinator	prof. dr. W.J. Fokkink
Examinator	prof. dr. W.J. Fokkink
Lesmethode(n)	Hoorcollege, Practicum, Werkcollege
Niveau	500

Doel vak

Learning to use formal techniques for specification and validation of communication protocols.

Inhoud vak

This course is concerned with the specification and validation of protocols, using formal methods. The course is based on a specification language based on process algebra combined with abstract data types, called mCRL. This language and its toolset can be used for the

specification of parallel, communicating processes with data. Model checking is a method for expressing properties of concurrent finite-state systems, which can be checked automatically. Interesting properties of a specification are: "something bad will never happen" (safety), and "something good will eventually happen" (liveness). In the lab we will teach the use of a tool for automated verification of the required properties of a specification.

Onderwijsvorm

4 hours per week HC

4 hours per week WC/PR (mixed)

During the practicum the mCRL tool and the CADP model checker will be used for the validation of protocols discussed during lectures.

-

Toetsvorm

Written exam, together with a practical homework assignment. The overall mark of the course is $(H+2W)/3$, where H is the mark for the homework assignment, and W is the mark for the written exam.

Research Proposal Writing

Vakcode	X_405023 (405023)
Periode	Periode 2
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Exacte Wetenschappen
Coördinator	prof. dr. A.S. Tanenbaum
Examinator	prof. dr. ir. H.E. Bal
Docent(en)	prof. dr. ir. H.E. Bal
Lesmethode(n)	Hoorcollege
Niveau	600

Doel vak

The aim of this course is to learn to read papers at a research level, organize the material for the framework of a seminar talk, and practice presentation skills for such talk. At the end of this course, the student will be able to acquire the prerequisites for reading and understanding a paper by researching the literature on his own,

understand the logic of a paper, and be able to critically evaluate a paper. He or she will be able to extract and condense the material for a talk of a fixed length, and give a captivating and interesting talk to fellow students.

Inhoud vak

This course has the single main aim to teach students the first steps of writing a research proposal. Students are asked to evaluate a number of existing proposals that were submitted by staff members in recent years. In addition, each student will also have to write his or her own proposal, which is then evaluated by fellow students following a procedure very similar to what happens in real life. This class may only be attended by PDCS students.

Systems Security

Vakcode	X_405108 ()
Periode	Periode 4
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Exacte Wetenschappen
Coördinator	prof. dr. ir. H.J. Bos
Examinator	prof. dr. ir. H.J. Bos
Docent(en)	prof. dr. ir. H.J. Bos

Lesmethode(n)	Hoorcollege, Werkcollege
Niveau	500

Doel vak

Introductory (but very tough) course on security with a scope that includes systems work. At the end of the course students will deeply understand the basic notion of memory corruption attacks (buffer overflows, format strings, etc), SQL injection, cross-site scripting attacks, and other vectors used by computer hackers. The course is very(!) hands-on.

Inhoud vak

The course covers a wide spectrum of security issues. We explicitly aim wider than cryptography, as we want to show students how hackers penetrate systems. Much of the course will be hands-on: in lab assignments, student will carry out and investigate attacks in a controlled environment. This involves programming at the both the highest and lowest levels (say SQL and assembly). However, we will plan to discuss cryptography and trust infrastructures.

Onderwijsvorm

Lectures and (very challenging) practical assignments.

Toetsvorm

Written exam (30%) and practical assignments (70%).

Literatuur

No set book. All material will be made available during the course.

Aanbevolen voorkennis

No formal requirements, except a keen interest and a lot of time. Programming experience in C very strongly recommended. Knowledge of assembly and computer architecture helps too.

Doelgroep

mCS, mPDCS.

Term Rewriting Systems

Overige informatie

The course is taught once every two years, the next opportunity will be in study year 2014-2015

Term rewriting systems (TRSs) provide for a natural formalism for specifying rules of computation and investigating their properties. TRSs are of basic importance for functional programming and for the implementation of abstract data types. Applications can also be found in theorem proving, proof checking and logic programming. Some topics that will be covered in the course are:

- abstract reduction systems
- critical pairs and Knuth-Bendix completion
- orthogonality and reduction strategies
- termination (rpo's, monotone algebras)
- combinatory logic
- decidability issues
- infinitary rewriting
