

Clinical and Developmental Psychopathology (MScRes)

Vrije Universiteit Amsterdam - Faculteit der Psychologie en Pedagogiek - RM Clinical and Developmental Psychopath - 2014-2015

The Research Master program in Clinical and Developmental Psychopathology is part of the William James Graduate School. It is a two year program of total 120 ECTS, 60 ECTS a year.

Goals of the Program

After completion of the programme, graduates will be qualified to work as competent psychological researchers with an independent work attitude. They will be capable of successfully completing a PhD programme, or working in a research institution, tackling multidisciplinary and interdisciplinary questions at the intersection of clinical psychology, developmental psychology, and educational sciences, with an emphasis on translational research, translating theoretical insights into clinical applications and/or clinical experiences into theoretical insights.

Advanced Research Training

Vakcode	P_MADVRT ()
Periode	Ac. Jaar (september)
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Psychologie en Pedagogiek
Coördinator	dr. J.W. van Prooijen
Examinator	dr. J.W. van Prooijen
Niveau	400

Doel vak

To gain additional experience in designing and conducting a research study, analyzing the data, and writing a report.

Inhoud vak

This is a free choice-course that is designed for students who would like to gain more research experience. Students will participate in the research programme by a staff member. In close collaboration with the staff member, the student will design and conduct a research study, and

analyze the data. Typically, the supervisor will be a different staff member than the student's supervisor for Research project I, II, or III, unless explicitly approved of by the coordinator of this course. The project will end with a research report written by the student.

Onderwijsvorm

Individual supervision

Toetsvorm

Research report, to be graded according to the faculty's evaluation forms.

Literatuur

Depends on the topic

Overige informatie

The supervisor for this course should be part of (one of) the department(s) that organise the Research master programme the student is enrolled in.

The supervisor will be assigned depending on availability and on the specific project that the student will work on.

Students can take this course only once, so either in year 1 or in year 2, not in both years.

Advanced Structural Models

Vakcode	P_MADSTRM (815005)
Periode	Periode 2
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Psychologie en Pedagogiek
Coördinator	dr. J.M. Tybur
Examinator	dr. J.M. Tybur
Docent(en)	dr. J.M. Tybur
Lesmethode(n)	Hoorcollege, Practicum
Niveau	400

Doel vak

This course is designed to give students the skills to use structural equation modeling to analyze their data and to understand structural equation modeling results reported in the scientific literature.

Inhoud vak

The course will cover fundamental issues in social psychology research, including ethics in collecting and reporting data, assumptions underlying the null hypothesis significance testing framework, statistical power, and methods in assessing reliability and validity of instruments and methods. Each student will also research, write a paper on, and give a presentation on a method used in social psychology research.

Onderwijsvorm

There will be eight lectures in which the instructor teaches about structural equation modeling and seven practicum sessions in which the instructor will assist students with conducting analyses in the computer lab.

Toetsvorm

Assessment will include a research paper, a data analysis assignment, and a final exam. Partial grades are only valid during the study year in which the grade has been achieved.

Literatuur

Brown, T. A. (2006). Confirmatory factor analysis for applied research. New York: Guilford. Additional Journal articles will be assigned and available on blackboard.

Overige informatie

This course assumes basic knowledge of multiple regression and null hypothesis significant test.

Aging and Mental Health

Vakcode	P_MAGMENT ()
Periode	Periode 2
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Psychologie en Pedagogiek
Coördinator	prof. dr. A.M. Pot
Examinator	prof. dr. A.M. Pot
Docent(en)	prof. dr. A.M. Pot
Lesmethode(n)	Hoorcollege
Niveau	400

Doel vak

In this course, students will learn the psychological problems of older people and what is known about the effectiveness of psychological interventions.

Inhoud vak

The number of people 65 years or older in the Netherlands is increasing from 2,4 million now to 3,6 million in 2025. Psychological problems in later life need their own psychological interventions to reduce or prevent them. In this course, students will learn about the psychological problems of older people and what is known about the effectiveness of psychological interventions. These interventions are partly developed for younger adults and adapted for seniors, and partly specifically developed for problems in later life, such as providing family care and coping with losses, chronic diseases and disabilities. Because older adults form a heterogeneous and multiform group, scientific research on the effectiveness of interventions has its own problems. In this course, these problems and the challenges and threats of intra-individual techniques will be discussed. Students will participate in the ongoing research on the effectiveness of psychological interventions for older adults (RCT or N=1) affiliated to the Chair Geropsychology and write a paper based on the data.

Onderwijsvorm

Visit to long-term care Facility, lectures and active involvement of students.

Toetsvorm

Written exam, oral presentation, paper, and research proposal.

Literatuur

Journal articles and book chapters, specific references can be found on Blackboard.

Overige informatie

This course will be taught in 2014/15. This course will NOT be taught in 2015/16

Autism and Developmental Disorders

Vakcode	P_MAUTDEV ()
Periode	Periode 2
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Psychologie en Pedagogiek
Coördinator	dr. S.M. Begeer
Examinator	dr. S.M. Begeer
Docent(en)	dr. S.M. Begeer
Lesmethode(n)	Hoorcollege
Niveau	400

Doel vak

This course will offer a critical overview of recent research on phenotype, cause, prevalence, co-morbidity, assessment and treatment of autism spectrum disorders. Students will also be informed about the most recent assessment and treatment methods available in the Netherlands.

Inhoud vak

Autism Spectrum Disorders are complex neurobiological disorders that last throughout an individual's lifetime. With a prevalence of 1 in 150, they are more common than pediatric cancer, diabetes, and AIDS combined. However, few disorders seem more confusing than autism. Common stereotypes, of the withdrawn, mute child with repetitive activities, do no justice to the wide variety of individuals with an autism spectrum diagnosis. To date, there is no single treatment protocol for all children with autism spectrum disorders. More importantly, the information about the effectiveness of treatments is very limited. While the main focus will be on autism, several other disorders with overlapping problem domains will also be discussed.

Onderwijsvorm

Lectures and presentation meetings.

Toetsvorm

Written exam, oral presentation and research proposal.

Literatuur

Recent research papers provided through BlackBoard.

Overige informatie

This course will NOT be taught in 2015-16.

Brain, Cognition, and Mental Health

Vakcode	P_MBRCOGM ()
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Psychologie en Pedagogiek
Coördinator	dr. M. Huizinga
Examinator	dr. M. Huizinga
Docent(en)	dr. N.C. Lee, dr. M. Huizinga
Lesmethode(n)	Hoorcollege, Werkcollege
Niveau	400

Doel vak

This integrated series of lectures and tutorials will address research in applied and basic neuroscience, which aims to elucidate the mechanisms of mental functioning both in healthy individuals and patient populations. The course aims to provide students with background knowledge on both brain development and the research methods commonly used in neuroscience research, as well as current trends related to mental health.

Inhoud vak

The neuroscience approach to mental health focuses on the relationship between the brain and behaviour. Brain-behaviour relationships can be studied in diverse populations ranging from children to adults and patient populations to healthy controls. This course revolves around the view that mental health and mental dysfunction are the consequence of the dynamic interplay of biological factors, psychological factors and socio-cultural factors. The course will start by providing students with an introduction to brain anatomy as well as the most common methods used in the neuroscience research. During subsequent sessions distinguished lecturers will present the most recent trends in their field of research, covering the stages of normal and abnormal development from childhood to adulthood. Students will be encouraged to actively engage with the invited speakers as well as discuss the presented material in more detail during the weekly tutorial group meetings.

Onderwijsvorm

Lectures and tutorials

Toetsvorm

To pass this course students will need to:

- Complete a quiz on blackboard each week to assess their prior knowledge on the topics covered in that week's lecture.
- Actively participate in both the lectures and tutorial groups (attendance is mandatory).
- Pass the final exam by achieving a mark of 5,5 or higher (the exam will consist of open-ended questions)

Literatuur

Research articles and book chapters will be provided via blackboard.

Overige informatie

This course is not taught in 2014-15, but will be taught in 2015-16.

Students who have not successfully completed the course in 2013-14 can contact the lecturers for an extra resit possibility in 2014-15.

Cognitive Behaviour Therapy

Vakcode	P_MCOBETH ()
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Psychologie en Pedagogiek
Coördinator	prof. dr. W.J.M.J. Cuijpers
Examinator	prof. dr. W.J.M.J. Cuijpers
Docent(en)	prof. dr. W.J.M.J. Cuijpers, prof. dr. M. van der Gaag
Lesmethode(n)	Hoorcollege
Niveau	400

Doel vak

The students will have an overview of the state of the art in research on cognitive behaviour therapy; they will critically evaluate the scientific status of the research in the field; they will design research studies in a group session as well as in an individual presentation.

Inhoud vak

Cognitive behaviour therapy is by far the best examined psychotherapy, which has been applied in many target groups and in a range of mental health and general medical conditions. Cognitive behaviour therapy is the best intervention to use as an example of how research on psychotherapy can be conducted. In this course we focus on the core elements of what cognitive behaviour therapy is, in which target groups it can be used and how it can be adapted for using it in different target groups. We will also focus on the cognitive theories of mental disorders. It can also be used very well to explain the problems of examining how therapies work (mediators and moderators). Furthermore, we will focus on how to design studies using this type of therapy.

Onderwijsvorm

Lectures

Toetsvorm

2 written exams and an oral presentation.

Literatuur

Lesmethode(n)	Hoorcollege
Niveau	400

Doel vak

In this course the students learn the methods and principles of epidemiological research in clinical and developmental psychopathology.

Inhoud vak

Students will learn what the contribution of epidemiological research has been to our knowledge about etiology, diagnostics, prognosis, prevention, and treatment of mental disorders in children, adolescents and adults. The students will learn the most basic skills in conducting epidemiological research and to judge the quality of epidemiological research from other researchers. We will also focus on the principles and criteria for causality, internal and external validity, different types of errors, confounding, and effect modification. Furthermore, we will teach students the specific methods of conducting prospective research in developmental and clinical psychopathology.

Lesmethode(n)	Hoorcollege, Werkcollege

Niveau	400
---------------	-----

Doel vak

The goal of this course is to make students acquainted with the development of antisocial behaviour.

Inhoud vak

Of all children, approximately 20-30% will eventually engage in some form of antisocial behaviour or delinquent acts. A minority of those will engage in persistent antisocial behaviour from childhood onwards. In this course the influence of social relational en environmental risks throughout the childhood and adolescent years is discussed. Focus is on biosocial and genetic influences, and their interplay with environmental and social relational risk variables. These factors are presented using a developmental approach. That is, we focus is on how personal endowments, and social, behavioural and relational risk factors influence the stable high levels, but also increases and decreases in antisocial behaviour over the period of childhood and adolescence.

Onderwijsvorm

Lectures and tutorial groups

Toetsvorm

Report with an analysis of a real life case

Leadership and Organisations

Vakcode	P_MLEAORG ()
Periode	Periode 2
Credits	6.0
Faculteit	Faculteit der Psychologie en Pedagogiek
Coördinator	R.D. Ronay
Examinator	R.D. Ronay
Docent(en)	R.D. Ronay
Lesmethode(n)	Hoorcollege
Niveau	400

Doel vak

Leaders must be able to manage information, diagnose problems, and make effective decisions, as well as coordinate and motivate the human and social capital of their organizational members. This course aims to prepare you to understand and meet these goals by familiarizing you with leadership theory, and providing you with practical experiences through case studies and experiential activities.

Inhoud vak

This course uses insights from psychology and management science to inform students about leadership theory and practice. In addition to formal lectures, we will use a combination of case studies and practical exercises to help students develop their decision-making skills, their

powers of persuasion and influence, and their ability to negotiate more effectively with others.

Onderwijsvorm

Course packet including articles, chapters, and cases.

Toetsvorm

Course contribution (10%); Group project (25%); Final exam (65%).
Partial grades are only valid during the study year in which the grade has been achieved.

Literatuur

Master's Thesis

Vakcode	P_MTHECDP ()
Periode	Ac. Jaar (september)
Credits	30.0
Voertaal	Engels
Faculteit	Faculteit der Psychologie en Pedagogiek
Coördinator	prof. dr. W.J.M.J. Cuijpers
Examinator	prof. dr. W.J.M.J. Cuijpers
Niveau	500

Doel vak

The aim of the Master's Thesis is to integrate the knowledge and skills acquired during the Research Master, and to apply this knowledge and skills in research.

Inhoud vak

The Master's Thesis will be developed and conducted within the research program of one of the participating departments. During this period, the student will be member of a research group, and will be involved in all phases of the scientific cycle. The quality of the Thesis will be guaranteed by a 'go-no go' decision, which will be made by a senior staff member based on a written research plan, including the research question, field research or experimental protocol, statistical design and feasibility. In principle, the student will contribute with his or her work to an ongoing research project. Daily coaching will be the responsibility of the principal investigator of the project. As part of the Master's Thesis the student will log all major phases of conducting research (protocol design, data collection, data management, data analysis) as well as reporting (writing a manuscript fulfilling the APA requirements for a journal article; revising the manuscript based on anonymous reviewer feedback; presenting a research paper at a symposium). The Master's Thesis is written in the form of an article, which, as a rule, will be submitted for publication to an international, peer-reviewed journal.

Onderwijsvorm

Individual trajectory within one of the participating research groups.

Toetsvorm

Paper, research log, oral presentation.

Vereiste voorkennis

Research Project I

Overige informatie

The Master's thesis will be lectured by prof. dr. W.J.M.J. Cuijpers, prof. dr. J.M. Koot and prof. dr. C. Schuengel.

Memory and Memory Disorders

Vakcode	P_MMEMORY (815102)
Periode	Periode 2
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Psychologie en Pedagogiek
Coördinator	dr. R.J. Godijn
Examinator	dr. R.J. Godijn
Docent(en)	dr. R.J. Godijn
Lesmethode(n)	Hoorcollege
Niveau	400

Doel vak

The course aims to give students an overview of memory at the cognitive and neurophysiological level, and to give students the background to interpret memory disorders in patients with brain damage.

Inhoud vak

The course focuses on various approaches in the study of human memory and memory disorders. We will discuss working memory, encoding-retrieval interactions, interference and forgetting implicit memory, and the brain substrate of memory. We will also discuss clinical testing of memory, and memory loss after local brain damage, dementia, and other conditions.

Onderwijsvorm

12 two- hour lectures and workshops, assignments and oral presentations.

Toetsvorm

Exam, assignments, and presentation.

Literatuur

Various papers, to be announced via Blackboard.

Overige informatie

This course will be lectured once every two years; the course will be NOT be lectured in 2013-14, but will be lectured in 2014/15.

Neuroscience and Education

Vakcode	P_MNEURED ()
Periode	Periode 2

Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Psychologie en Pedagogiek
Coördinator	dr. N.M. van Atteveldt
Examinator	dr. N.M. van Atteveldt
Docent(en)	drs. A.M. Boschloo, prof. dr. A.C. Krabbendam
Lesmethode(n)	Hoorcollege

Doel vak

The aim of the course Neuroscience and Education is to provide students with the knowledge and skills necessary to evaluate and conduct research at the interface between neuroscience and education.

Inhoud vak

Many scientists, policymakers and teachers share the belief that knowledge of the brain is relevant to educational practice. Yet, implementing neuroscientific findings in the classroom is by no means straightforward. This course will focus on the interdisciplinary knowledge and skills needed to integrate neuroscientific and educational approaches and to translate neuroscientific research to educational practice. Students will learn how to integrate diverse methodological approaches, ranging from the highly controlled laboratory experiments typical to the cognitive neuroscience approach, to the qualitative approaches used in the social sciences. During the whole course, students are encouraged to critically reflect on the current enthusiasm for a brain-based education. In this context, the course will specifically discuss the proliferation of neuromyths and the ethical issues arising from the neuroeducational approach.

Onderwijsvorm

Lectures and tutorials

Toetsvorm

Written exam with open-end questions (50%); research proposal (50%).

Literatuur

A selection of relevant articles, to be announced.

Overige informatie

This course will be lectured once every two years; the course will be NOT be lectured in 2013-14, but will be lectured in 2014-15.

Parenting and Mental Health

Vakcode	P_MPARMEN ()
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Psychologie en Pedagogiek
Coördinator	prof. dr. C. Schuengel
Examinator	prof. dr. C. Schuengel
Docent(en)	prof. dr. C. Schuengel, dr. M. Oosterman
Lesmethode(n)	Hoorcollege
Niveau	400

Doel vak

To gain theoretical insight in the models that connect parenting to the development of psychopathology, either as a risk or a resilience factor, most prominently attachment theory and emotional security theory. To scrutinize the assumptions of current research that examines environmentally mediated linkages between parenting and development and models of intergenerational transmission of attachment and psychopathology. To learn how to avoid common confounds in parenting-mental health research. To become proficient in analyzing theoretical propositions in terms of causal models, including mediating and moderating mechanisms. To critically examine evidence for theoretical models of attachment and emotional security.

Inhoud vak

From the perspective of developmental psychopathology, the role of parenting at different system levels is highlighted. This includes an in-depth theoretical treatment of parent-child relationships, as well as parental behaviour and socialization practices, the exposure of children to conflicts between parents, and child maltreatment. Particular attention is paid to research that links parenting to child outcomes on the psychophysiological level, and to research into the buffer that parenting may provide against risk factors for the development of psychopathology, including chronic disease, physical and intellectual disabilities, bullying, and instable family arrangements. This course also pays attention to the methodological challenges in distinguishing environmental family effects from biological effects, including the use of interventions as well as experiments of nature such as adoption or foster care. Developmental psychopathology offers different theoretical tools to analyse the interactions of factors at different systems levels. A common thread in the course will be training in analysis of theoretical models, using mediating and moderating mechanisms as theoretical tools, and learning how evidence for mediating and moderating effects can be derived from quantitative research data.

Onderwijsvorm

Lectures and seminars.

Toetsvorm

Written exam and paper. Both count for 50% of the grade.

Lesmethode(n)	Hoorcollege
Niveau	500

Doel vak

This course provides information and skills needed to cover the process aspects of an academic-clinical study. It addresses the process from idea development, the generation of financial resources, expertise, and study samples to the execution of relevant procedures, and illustrates the ways studies can profit from collaboration among academics, and between academics and clinicians.

Inhoud vak

Students will attend presentations on aspects of research practice from the idea to the scientific reporting of results. They will practice the development of research proposals that include all elements required by funding agencies, including METC requirements.

Onderwijsvorm

Lectures and seminars.

Toetsvorm

Review, oral presentation and paper including a study design.

Literatuur

- Recent research papers, proposals and protocols
- EMGO+ Quality Handbook (<http://www.emgo.nl/kc/>)

Overige informatie

Lesmethode(n)	Hoorcollege, Werkcollege, Overig, Bijeenkomst
Niveau	400

Doel vak

The aim of this course is to integrate clinical and developmental perspectives of psychopathology, to achieve a thorough theoretical understanding of the developmental origins of mental health, and the clinical presentation of disorders. This course aims to build a firm theoretical foundation for the program components to follow, to provide an orientation on a variety of approaches, and to stimulate the process of integrating different perspectives.

Inhoud vak

Topics covered address physiological, genetic, cognitive, social-emotional, ecological, and relational factors as these relate to risks as well as protective factors for the development of mental health problems. Based on this broad showcase of perspectives, specific issues are addressed for the field of clinical and developmental psychopathology, namely the different approaches towards classification, etiology, and treatment.

Onderwijsvorm

Lectures as well as seminars.

Toetsvorm

Exam 1 (25%), Exam 2 (25%), Paper presentation (50%). There is one re-exam for all components together

Randomized Controlled Trials of Psychological Interventions

Vakcode	P_MRANCON ()
Periode	Periode 3
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Psychologie en Pedagogiek

Coördinator	prof. dr. A. van Straten
Examinator	prof. dr. A. van Straten
Docent(en)	prof. dr. A. van Straten, dr. A.M. Kleiboer
Lesmethode(n)	Hoorcollege, Practicum
Niveau	400

Doel vak

The aim of this course is to have an understanding of the major methodological issues in designing a randomized controlled trial (RCT) of a psychological intervention in mental health care. Students should be able to identify strengths and weaknesses of the designs of published trials and be able to design a trial themselves.

Inhoud vak

The course focuses on: the research questions which can be answered by a RCT, types of RCTs, design of a RCT according to the CONSORT statement (e.g. phrasing of the research question, choice of control group, blinding, randomization, power analysis, in- and exclusion criteria, measuring outcomes, treatment integrity), analyzing and presenting data (including how to deal with missing data), and economical analyses. Furthermore, we discuss medical ethical issues in performing a trial as well as practical aspects of carrying out a RCT.

Onderwijsvorm

(almost) every meeting consists of 45 minutes of theory and 45 minutes of practical (e.g. critically reviewing a paper; designing part of a trial, presentations of PhD students running a RCT).

Toetsvorm

There is an exam with open-end questions. Students also have to write a research proposal of a RCT (pre-specified format). The exam weighs 2/3 and the paper 1/3 of the final grade. Both the exam and the paper have to be sufficient (6 or higher).

Literatuur

Voertaal	Engels
Faculteit	Faculteit der Psychologie en Pedagogiek
Coördinator	dr. A.M. Kleiboer
Examinator	dr. A.M. Kleiboer
Niveau	400

Doel vak

The aim of the Year 1 Research Project is to integrate the skills and knowledge of the first year of the Research Master, after the students have taken their first step towards differentiation within the field of

clinical and developmental psychopathology.

Inhoud vak

During this part of the Research Master, the students will develop a research plan which is in line with the Elective Course the student has chosen. This research plan will be tutored by one of the senior researchers from the participating research groups. The plan will consist of several sections, including a description of the problem which will be examined, a research question, with specific hypothesis, and a methods section which contains all the components of the methods, such as the research population, procedures, data collection, measurement instruments, and the proposed analyses.

Onderwijsvorm

Individual trajectory within one of the participating research groups.

Toetsvorm

Development of plan, oral presentation.

Overige informatie

The course will be lectured by prof. dr. W.J.M.J. Cuijpers, prof. dr. J.M. Koot and prof. dr. C. Schuengel.

Scientific Writing and Presenting (CDP)

Vakcode	P_MSWP CDP ()
Periode	Periode 4
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Psychologie en Pedagogiek
Coördinator	dr. S.M. Begeer
Examinator	dr. S.M. Begeer
Docent(en)	dr. S.M. Begeer
Lesmethode(n)	Hoorcollege
Niveau	400

Doel vak

This module aims to develop two important academic skills: scientific writing, and presenting. It is intended for research master's students. Students will learn to write an article in English for a peer-reviewed academic journal, and present with confidence in English for an academic audience.

Inhoud vak

In course part on writing a top down approach is used with successive focus on the structure of a research report, its paragraphs and sentences. During this part gradual improvement of the text is aimed for by writing and truning in the introduction, the methods and results section, and finally the discussion. During the course part on presenting the student learns to present information in English clearly, structured and in a correct way. The focus will be on writing an empirical article, although attention is also given to the writing of a literature review or a theoretical article. The course addresses key problem areas in written English and APA guidelines. Students will learn to present empirical research for international audiences (e.g., oral

presentation). The module addresses issues such as structuring a presentation, responding to questions, and the use media of facilities.

Specifically, the course includes the following topics:

Writing: Focus is on main parts of a scientific paper, structure and coherence at the paragraph and sentence level. Further, grammar and punctuation, the use of active and passive sentences, phrasing, academic vocabulary, readability, correction and referencing will be taught.

Presenting: Focus will be on preparation and performance of PowerPoint and poster-presentations. Further, attention will be given to use of vocabulary and idiom in presentations in English, verbal fluency, build-up of presentations, pronunciation and sentence production, use of grammar and body language.

Onderwijsvorm

Lectures, workshops, and writing assignments.

Toetsvorm

Writing a paper, oral presentation.

Literatuur

- Reader.
- Students are advised to acquire the APA manual.

Systematic Reviews and Meta-analyses of Psychological Interventions

Vakcode	P_MSYSREV ()
Periode	Periode 4
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Psychologie en Pedagogiek
Coördinator	prof. dr. W.J.M.J. Cuijpers
Examinator	E. Karyotaki
Docent(en)	prof. dr. W.J.M.J. Cuijpers, prof. dr. A. van Straten
Lesmethode(n)	Hoorcollege, Practicum
Niveau	400

Doel vak

In this course, the students learn how to conduct systematic reviews and meta-analyses of randomized controlled studies in psychological and educational sciences. We focus especially on systematic reviews of psychological interventions for mental health problems. However, we also teach students how to conduct meta-analyses of observational and diagnostic studies.

Inhoud vak

First, students will learn how to formulate an adequate research question for a meta-analysis. Then, we will teach them how to conduct literature searches in major bibliographical databases (PsycINFO, PubMed, Embase, Cochrane database), the process of selecting studies, and data extraction. The different methods of calculating effect sizes will be explained, as well as random and fixed effects models in pooling

available effect sizes. We will also explain how to conduct subgroup analyses, univariate and multivariate meta-regression analyses, and tests for publication bias. The different software packages will be illustrated. Each student will conduct a (small) meta-analysis as part of this course.

Onderwijsvorm

Lectures as well as seminars.

Toetsvorm

Paper, written exam.

Theory of Therapeutic and Preventive Intervention

Vakcode	P_MTHEOTH ()
Periode	Periode 5
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Psychologie en Pedagogiek
Coördinator	prof. dr. C. Schuengel
Examinator	prof. dr. C. Schuengel
Docent(en)	prof. dr. C. Schuengel, prof. dr. W.J.M.J. Cuijpers
Lesmethode(n)	Hoorcollege, Werkgroep
Niveau	400

Doel vak

- Acquire knowledge of and insight into the processes through which interventions reach their effects;
- Acquire knowledge of and insight into the way scientific research may test rationales for particular interventions;
- Develop the habit of scrutinizing the evidence base for particular therapeutic approaches and intervention protocols;
- Develop skills for critically analyzing intervention rationales, to judge their empirical support, and to apply theory in designing interventions for specific problems.

Inhoud vak

Interventions to alleviate or prevent psychopathology are expected to be designed and delivered on a rational basis, which means that a particular analysis of the clinical problem at hand has led to a well-considered choice for therapeutic procedures and tools. However, explanations why some therapeutic approaches are more effective than others have remained largely speculative, insofar differences in effectiveness do exist. For some techniques, theoretical explanations have been found after these were applied, such as with EMDR. Nevertheless, theoretical insight in the processes through which interventions reach their effects is necessary for improving interventions, and for drawing consequences from treatment success for scientific theory. The goals of this course are to scrutinize the evidence base for particular therapeutic approaches and intervention

protocols, and to learn how scientific research may test rationales for particular interventions.

The framework for the course is set by introducing the debate on design and justification of interventions by discussing the protagonists of the debate, key concepts, and theoretical models. Empirical evidence for the respective schools of thought is examined in a next step. Overviews are presented on psychological theories for specific therapeutic change mechanisms as well as change mechanisms based on common and incidental factors. As a special case in point, research on post hoc explanations of effective interventions will be discussed for Eye Movement Desensitization Therapy (EMDR). The course works towards the application of frameworks that can be used for optimal design of interventions, and the design of empirical tests of their effectiveness.

In seminars, the theoretical and empirical foundation of mechanisms of intervention will be brought to bear on current practices in psychotherapy, in particular psychodynamic therapy and e-health psychotherapy.

Onderwijsvorm

Lectures as well as seminars with researchers and clinical experts.

Toetsvorm

Written exam; oral presentation. Both count for 50% of the grade.

Thinking and Deciding

Vakcode	P_MTHIDEC (815049)
Periode	Periode 2
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Psychologie en Pedagogiek
Coördinator	dr. M. Meeter
Examinator	dr. M. Meeter
Docent(en)	L. Zwaan
Lesmethode(n)	Hoorcollege
Niveau	400

Doel vak

Explaining and providing understanding of theories, research methods and practical aspects about human judgment, rational thinking, dilemmas and choices.

Inhoud vak

Why do we make certain decisions? What is rational thinking, and what keeps us from it? How can we improve our thinking and decision processes? How do we reason and choose in uncertain (risk) situations? What is the influence of (moral) beliefs and emotions?

Onderwijsvorm

Lectures, literature study, oral presentations and discussion.

Toetsvorm

Oral presentation, contribution to discussion, and a review paper.

Literatuur

A selection of articles and book chapters.

Trends in Brain and Behaviour

Vakcode	P_MTRBRBE ()
Periode	Periode 1
Credits	6.0
Voertaal	Engels
Faculteit	Faculteit der Psychologie en Pedagogiek
Coördinator	prof. dr. A.C. Krabbendam
Examinator	prof. dr. A.C. Krabbendam
Docent(en)	dr. N.C. Lee, dr. M. Huizinga, dr. N.M. van Atteveldt
Lesmethode(n)	Hoorcollege, Werkcollege
Niveau	500

Doel vak

This course will address research in applied and basic neuroscience, which aims to elucidate the mechanisms of mental functioning both in healthy individuals and patient populations. The course aims to provide

students with background knowledge on the research methods commonly used in neuroscience research, as well as current trends related to mental health. It will also cover the integration of neuroscientific research methods with other disciplines in the cognitive sciences in order to give students insight into the multidimensional nature of many conditions. It offers training in integrative thinking and critical evaluation of the value of integrating different scientific approaches. Students will work on an interdisciplinary research proposal using methods from neuro- and cognitive sciences and focusing how on the integration of these fields can be utilised to increase our understanding of psychopathology.

Inhoud vak

The neuroscience approach to mental health focuses on the relationship between the brain and behaviour. Brain-behaviour relationships can be studied in diverse populations ranging from children to adults and patient populations to healthy controls. This course revolves around the view that mental health and mental dysfunction are the consequence of the dynamic interplay of biological factors, psychological factors and socio-cultural factors. It is becoming increasingly clear that in the future innovative insights will depend on integrated studies of brain and cognition.

This course will focus on using neuroscience to understand psychopathology. During the first half of the course students will become acquainted with neuroscientific research methods, and the ways in which these methods can be combined with those used in clinical, developmental and cognitive research to further understanding of mental disorders. The lecturers will focus on normal and abnormal developmental trajectories. During the second half of the course students will learn how to use an interdisciplinary brain and cognition approach to write a research proposal for a grant application, such as the NWO TopTalent grant. Students will receive extensive feedback on their proposal from lecturers and fellow students. In the final week of the course students will present and defend their proposals in front of a panel of experts.

Onderwijsvorm

Lectures and tutorials

Toetsvorm

To pass this course students will need to:

- Write an integrative research proposal.
- Give an oral presentation in which they defend the content of their research proposal.
- Actively participate in giving feedback to fellow students on their research proposals.

Literatuur

Research articles and book chapters provided via blackboard.
